

## Executive Summary

- Modular security platform you can adopt in phases.
- Designed to complement existing IT and security tooling (deployment-dependent).

## Product Modules

### Console

Central Management Hub

- Centralizes visibility and reporting across deployed 3SN modules.

Why it matters: Faster triage with a single operational view.

- Supports policy administration and delegated operations (as configured).

Why it matters: Improves consistency at scale and least-privilege workflows.

### Endpoint Client

Endpoint Control + Telemetry

- Enforces endpoint posture controls and standardizes configurations.

Why it matters: Reduces gaps from inconsistent endpoint builds.

- Provides endpoint telemetry to support investigations (as configured).

Why it matters: Shortens time to understand impact and root cause.

### Scanner

Vulnerability Discovery

- Identifies vulnerabilities and misconfigurations for remediation planning.

Why it matters: Turns exposure into an actionable, prioritized backlog.

- Supports recurring assessments and closure verification cycles.

Why it matters: Helps prove risk reduction and prevents regressions.

### Proxy Platform

Traffic Policy Enforcement

- Acts as a centralized enforcement point for traffic governance.

Why it matters: Creates consistent guardrails and reduces policy gaps.

- Generates audit-oriented activity records (scope varies by deployment).

Why it matters: Improves traceability for reviews and investigations.

### Training Portal

Security Awareness Enablement

## Professional Services

### Vulnerability Management Program

- Scan -> prioritize -> remediate -> validate (cadence and scope by engagement).

Why it matters: Establishes repeatable security operations vs. ad-hoc fire drills.

### Ethical Hacking / Penetration Testing

- Offensive validation of controls and real-world exploitability.

Why it matters: Focuses remediation on paths to impact.

### Monitoring / Detection Support

- Ongoing monitoring options with triage and escalation workflows (SLA-defined).

Why it matters: Improves detection/containment without building a full in-house SOC.

### Incident Readiness

- Playbooks, process alignment, and operational hardening.

Why it matters: Reduces confusion under pressure and shortens time-to-recover.

### Governance & Policy Enablement

- Policies/standards/procedures to operationalize security requirements.

Why it matters: Improves auditability and makes security repeatable across teams.

### Compliance Support

- Evidence preparation, control mapping, and security questionnaire support.

Why it matters: Minimizes disruption to engineering while improving readiness and trust.

### Trust & Scope Notes

- Capabilities and integrations vary by package and deployment; scope is confirmed during scoping.

- Contact 3SN for current documentation and recommended configurations.
